London, England 🏠

UX designer with 5+ years experience leading products from early-stage discovery to technical delivery across Fintech, SaaS, and enterprise ecosystems. Grounded in a deep user understanding, qualitative research, and facilitation, with the technical ability to build scalable design systems and work closely with engineering teams. I combine human-centred fundamentals with modern AI tooling to advocate for the users while driving measurable business impact.

Experience

UX/UI Manager - Lendhub

Full-time | October 2025 - current

Working as their first in-house designer to bring design capability to their practices. I did this by designing high-quality, responsive digital platforms for our customers, getting stuck-into copywriting, working with the engineering department to create consistent outputs as well as collaborating with internal staff to identify and push valuable outputs to clients to increase our loan book.

- Built Lendhub's first design system as the company's founding in-house designer, establishing brand-consistent UI patterns across all visual outputs.
- Documented the system as a DESIGN.md reference, providing engineers a single source of truth, significantly cutting inconsistencies and the number of re-work requests.
- Designed and shipped the 'quick-calculator' and loan-management platform which drove approximately £3m in loan enquiry value in its first 3 months.
- Created a template library for all marketing outputs, reducing the production time per asset while preserving quality.
- Strategised and authored a customer notifications service, providing clients with real-time status updates throughout the life of their loan, significantly more clarity than previously.
- Created customer-facing product and process guides for sales, credit, and portfolio teams, standardising how Lendhub communicates loan terms and processes.

UX Freelance | Outta Spatial + TopBunk + Calmerseas

Short-term contracts | October 2024 - October 2025

Partnering with digital & communication agencies and direct clients to uplift customer digital touch points. Including launching new products, service blueprints, responsive wire-framing, accessibility reviews, and e-commerce builds via Shopify.

- E-Commerce Launch, owned the end-to-end design and rollout of a custom Shopify platform, from initial user research to live release, and iterated post-launch using analytics and feedback loops.
- Applied conversion optimisation and A/B testing on a client platform, driving measurable gains in engagement and enquiries.
- Defined and delivered Figma component libraries, establishing rules for colour, spacing, and typography to support scalable growth across client projects.
- Produced hi-fidelity, responsive wireframes for development across multiple agency clients, partnering closely with developers to ensure accurate, smooth handover.
- Created hi-fidelity, responsive wireframes for development across multiple agency clients, all while partnering closely with engineers to ensure a smooth and accurate development process.

Career break

May 2024 - Oct 2024

Relocated from Adelaide to London, so took some time out to travel, explore, meet new people and have new experiences

User Experience consultant | Aplo

Full-time | Jul 2021 - May 2024

I led discovery workshops, user research and strategic design initiatives for enterprise and SaaS clients. Proudly responsible for translating user needs alongside business requirements into the relevant outputs. Deliverables included service blueprints, design systems, wireframes, and responsive prototypes. The deliverables all balanced both user and business goals that were both intuitive and feasible to build.

- Led UX research and user testing with 150+ users, from six-year-olds to executives, for an education platform. Uncovered insights, and translated those into prototype iterations, securing funding for the first time after 3 failed attempts and shaped the subsequent product roadmap.
- Developed a design system from very basic brand assets, and expanded those into scalable, digital UI components, adopted across both product and marketing teams, all with implementation guidance for use
- Produced personas, prototypes, and user stories that gave cross-functional teams a shared reference point for prioritisation decisions.
- Facilitated user and leadership workshops to align cross-functional and otherwise silo'd teams. Aligned the participants on shared user needs and product vision, as well as bridging the gap between technical and on-technical stakeholders. Outputs informed the subsequent tech spending over the incoming financial year.
- Iteratively designed and presented prototypes from low to high fidelity, incorporating ongoing feedback to refine ideas and keep users at the very centre of decisions.

UX designer | Peak Metrics

Contract alongside Aplo | July 2021 -March 2022

Partnered with a government organisation to design a pilot product exploring how tourists navigate cities.

- Assisted in running discovery and ideation workshops, to; align the different members, understand their pain-points, ideas, future strategy and product direction.
- Assisted in research workshops through to mid-fidelity prototyping, translating early insights into testable concepts.
- Iterated mid-fidelity prototypes based on ongoing client and user feedback, the pilot went on to secure funding for full production.
