London, England 🏠

Product Designer with over 5 years experience crafting user-centred experiences across varying industries including: consumer, e-commerce, travel, fintech and SaaS. My work as delivered results, including driving £10m in loan enquiries and securing funding for vital education projects. I have experience all around UX processes, from discovery research, usability testing, journey mapping, information architecture and wireframes and design systems.

I work closely with engineers, product and business stakeholders to balance user needs with commercial goals. Most recently I've been the first in-house designer at a growing lending business, building its design capability from scratch.

Experience

UX/UI Manager - Lendhub

Full-time | October 2025 - September 2025

First in-house designer in a fast-moving lending business. I own design end-to-end across customer-facing products and branding outputs, working closely with engineering and flexing across marketing, sales and credit teams to identify and push valuable outcomes to increase our loan book.

- Owned end-to-end design of the core loan-management platform, including its dashboards, and the quick-calculator, simplifying complex financial data and flows and driving £10M+ in loan enquiries on launch day.
- Designed a real-time notifications experience, giving borrowers clear status updates at every stage of their loan and reducing incoming support calls and emails.
- Prototyped features in code, giving engineers a working reference to build from and letting the team test ideas before committing to full builds.
- Designed dashboards as part of the platform work, presenting loan information at the level of detail each team needs.
- Built Lendhub's first design system on design tokens and documented it as a DESIGN.md reference, giving engineers a single source of truth for components and cutting inconsistencies and rework.
- Created product and process guides with the sales, credit and portfolio teams, so everyone explains loan terms and processes the same way.
- Created a template library for marketing outputs, roughly halving production time per asset, and coach the marketing team on good design habits.

Product Design Freelancer | Outta Spatial + TopBunk + Calmerseas

Short-term contracts | October 2024 - October 2025

Partnering with digital & communication agencies and direct clients to uplift customer digital touch points. Including launching new products, service blueprints, responsive wire-framing, accessibility reviews, and e-commerce builds via Shopify.

- Owned the end-to-end design and rollout of a custom Shopify e-commerce platform, from initial user research to live release, iterating post-launch using analytics and feedback loops.
- Carried out accessibility reviews against WCAG AA across client sites, prioritising fixes with developers to improve keyboard navigation, colour contrast and screen-reader support.
- Used analytics and post-launch feedback to identify and validate improvements to engagement and conversion on a client platform.
- Mapped service blueprints for clients to identify gaps between customer touchpoints, informing where design and product effort would have the most impact.
- Produced hi-fidelity, responsive wireframes for development across multiple agency clients, partnering closely with developers to ensure accurate, smooth handover.

Career break

May 2024 - Oct 2024

Relocated from Adelaide to London, so took some time out to travel, explore, meet new people and have new experiences

User Experience consultant | Aplo

Full-time | Jul 2021 - May 2024

Ran discovery, user research and design for enterprise, SaaS and public-sector clients, turning user needs and business requirements into service blueprints, design systems, wireframes and responsive prototypes.

- Led UX research and user testing with 150+ users, from six-year-olds to executives, for an education platform. Uncovered insights, and translated those into prototype iterations, securing funding for the first time after 3 failed attempts and shaped the subsequent product roadmap.
- Developed a design system from very basic brand assets, and expanded those into scalable, digital UI components, adopted across both product and marketing teams, all with implementation guidance for use
- Produced personas, prototypes, and user stories that gave cross-functional teams a shared reference point for prioritisation decisions.
- Facilitated user and leadership workshops to align cross-functional and otherwise silo'd teams. Aligned the participants on shared user needs and product vision, as well as bridging the gap between technical and on-technical stakeholders. Outputs informed the subsequent tech spending over the incoming financial year.
- Iteratively designed and presented prototypes from low to high fidelity, incorporating ongoing feedback to refine ideas and keep users at the very centre of decisions.

UX designer | Peak Metrics

Contract alongside Aplo | July 2021 -March 2022

Partnered with a government organisation to design a pilot product exploring how tourists navigate cities.

- Assisted in running discovery and ideation workshops, to; align the different members, understand their pain-points, ideas, future strategy and product direction.
- Assisted in research workshops through to mid-fidelity prototyping, translating early insights into testable concepts.
- Iterated mid-fidelity prototypes based on ongoing client and user feedback, the pilot went on to secure funding for full production.
